About MiraPAY Virtual Terminal

As long as you have an internet connection, you can turn any PC into a point-of-sale to process transactions from nearly any location – without any additional hardware or software. Eigen's **MIRAPAY Virtual Terminal** provides the flexibility and functionality for accepting credit cards, plus a full set of payments administration and reporting tools.

Challenge

Merchants are looking for an easy to setup, inexpensive payment solution for accepting credit card transactions. Whether selling online through a single computer or taking mail/phone orders through a large call center, POS applications are an invaluable tool. However, many of these solutions are costly and require software installation and continual upgrades. Storing cardholder data can represent a serious liability.

Solution

MIRAPAY Virtual Terminal allows you to process transactions from almost anywhere with just a user ID and password. Give access to as many employees as you like, control the types of transactions they can perform, and utilize a full range of real time reporting capabilities. Eigen stores all cardholder data, so you don't need to worry about storage or security. Eigen's simple interface requires minimal training so your users can begin taking orders immediately.

How Virtual Terminal Works

- Eigen issues you a user ID and password
- Your administrator assigns designated users and the transactions they can process
- Users login via Eigen's web site to the Virtual Terminal page
- When an order comes in, the user enters the currency, credit card number, expiration date, value of purchase and invoice number
- The user clicks "process" and the payment is authorized and completed in a matter of minutes

MIRAPAY[®] Virtual Terminal

Features

- Support for all major credit cards
- Comprehensive, web based administration and reporting
- Processes Canadian and US transactions
- End-to-end US dollar processing
- Extensive transaction histories
- Advanced transaction security with users authorized for specific transaction types - administrators can limit access to return transactions
- Data is protected with 128-bit encryption using the industry standard Secure Sockets Layer (SSL) protocol
- 24/7 service & support

Benefits

Help Your Business

- Take orders and process payments from wherever you like
- Automated nightly settlement
- Manage your business by having the option to assign user ID's and transaction authorization to designated employees
- Quick & easy setup - train staff and start accepting payments quickly
- Save money by reducing software and hardware requirements

Help Your Customers

- Let them pay how they like - over the phone, by mail or by fax
- Reduce their waiting time by processing orders quickly
- Keep their credit card information secure
